

## ENERGY STAR APPLIANCES

How does a member know if an appliance is rated Energy Star®?

The appliance will have an Energy Star® logo on the appliance or on the appliance information or packaging. Members can also visit the U.S. Department of Energy website to find a list of certified products - [www.energystar.gov/products/certified-products](http://www.energystar.gov/products/certified-products).

Only the following Energy Star® appliances qualify for a rebate - heat pump water heater, refrigerator, clothes washer, freezer, dishwasher and heat pumps.

### What are rebate dollar amounts?

Rebates are:

Heat pump water heater - \$300

Refrigerator - \$100

Clothes washer - \$75

Freezer - \$50

Dishwasher - \$50

Air-source heat pump or air conditioner - \$300

A heat pump water heater is also called a hybrid electric water heater. Like a heat pump, the water heater draws heat from the surrounding air to help heat water more efficiently. A standard electric water heater will use about \$585 a year to heat water, and a heat pump, or hybrid, water heater will use around \$220 - an annual savings of about \$365 per year. A heat pump water heater costs about \$1200 to purchase.

Split systems, which are the most common heat pumps, shall be 14.5 SEER or greater, with HSPF greater than 8.2. Package systems shall be 14 SEER or greater, with HSPF greater than 8.0.

The Energy Star® rebates processing will be handled through the mail. JEC members will fill out a rebate application form, which will be available on the JEC web site and at local offices.

Members must have a copy of their proof of purchase to send with the application and the appliance must have been purchased after January 1, 2015. A copy of the AHRI certificate is required for the heat pump rebate.

Rebate checks should arrive about four weeks after the application has been received. The check to the member will have a JEC logo when the member receives it.

***THIS IS NOT to be confused with the Heat Pump Retrofit Rebate, which will continue to be handled by the Energy Advisors.***
